## Genesis™ *Ultra* POUR-ON

*Roundworm, Liver Fluke & External Parasiticide for Cattle*

The first pour-on flukicide in the world, **Genesis Ultra Pour-on** contains 5mg/mL ABAMECTIN, a member of the macrocyclic lactone family of chemicals, and 300mg/mL TRICLABENDAZOLE

- Broad spectrum
- All three stages of Liver Fluke
- Rainfast
- Easy and convenient to use

### BROAD SPECTRUM

When used as directed, **Genesis Ultra Pour-on** treats and controls adult and immature stages of the following parasites of cattle.

#### Gastro-intestinal roundworms:

- Barber's Pole Worm (*Haemonchus placei*)
- Small Brown Stomach Worm (*Ostertagia ostertagi*) - including inhibited stages
- Small Intestinal Worm (*Cooperia oncophora*, *Cooperia punctata*)
- Stomach Hair Worm (*Trichostrongylus axei*)
- Hookworm (*Bunostomum phlebotomum*)
- Large Bowel Worm (*Oesophagostomum radiatum*)
- Whipworm (*Trichuris* spp)
- Thin-necked Intestinal Worm (*Nematodirus spathiger*)
- Intestinal Threadworm (*Strongyloides papillosus*)

**Lungworm** (*Dictyocaulus viviparus*)

**Liver Fluke** (*Fasciola hepatica*) - all three stages

#### Sucking and Biting Lice

- Long-nosed sucking louse (*Linognathus vituli*)
- Short-nosed sucking louse (*Haematopinus eurysternus*)
- Little sucking louse (*Solenopotes capillatus*)
- Biting louse (*Bovicola bovis*)

**Genesis Ultra Pour-on** also aids in the control of **Buffalo Fly** (*Haematobia irritans exigua*) and **Cattle Tick** (*Boophilus microplus*), but it is not recommended for use in strategic programmes for cattle tick control.

### ALL THREE STAGES OF LIVER FLUKE

Triclabendazole is the best flukicide available because it not only controls adult liver flukes (12 week old and over), but also the immature (6 week old) and early immature (4 week old) stages. This is an important feature because liver damage is caused by the immature stages of the liver fluke migrating through liver tissues. No other drug gives such good control of liver fluke.

## RAINFAST

**Genesis Ultra Pour-on** is rainfast. Rain occurring as early as two hours after treatment will not affect the efficacy of the product. It is not recommended, however, to treat cattle when rain is expected. Rainfall on cattle less than two hours after dosing may result in reduced efficacy.

## EASY AND CONVENIENT TO USE

**Genesis Ultra Pour-on** is applied at a dose rate of 1mL/10kg bodyweight, delivering 0.5mg abamectin and 30mg triclabendazole per kg bodyweight. It is applied along the back line of the animal in a strip starting between the shoulder blades. This allows easy visual confirmation that a full dose has been applied to all animals. **Genesis Ultra Pour-on** should not be applied to calves under 50kg bodyweight.

Live weight (kg)	Dose Volume (mL)	1 Litre Pack treats	2.5 Litre Pack treats	5 Litre Pack treats	15 Litre Pack treats
51-75	7.5	133	333	666	2000
76-100	10	100	250	500	1500
101-125	12.5	80	200	400	1200
126-150	15	66	166	333	1000
151-175	17.5	57	142	285	857
176-200	20	50	125	250	750
201-250	25	40	100	200	600
251-300	30	33	83	166	500
301-350	35	28	71	142	428
351-400	40	25	62	125	375
401-450	45	22	55	111	333
451-500	50	20	50	100	300
501-550	55	18	45	90	272
551-600	60	16	41	83	250
601-650	65	15	38	76	230

A white deposit may form on the back of treated animals. This is quite normal. It is not a sign of treatment failure and should not be interfered with. Do not brush off or wash off. This deposit may last for a few days or weeks depending on weather conditions.

## WITHHOLDING PERIODS

**MEAT:** 49 days

**EXPORT SLAUGHTER INTERVAL (ESI):** 140 days

**MILK:** DO NOT USE in dairy animals producing or which will in the future be producing milk for human consumption.
